

VIPER NEWS

• FOR IMMEDIATE RELEASE

Insulation Solutions' high performance under-slab vapor barrier, Viper® Vapor Check® II, along with our under-slab insulation, Insul-Tarp®, is available in BSD SpecLink®-E.

BSD SpecLink®E is a master guide specification writing software, designed to speed up the writing process while reducing errors and omissions. With integrated enhanced listings, the specifier no longer has to search for product information, it finds them.

The SpecLink®E also includes many productivity tools, including the ability to create automatic administrative reports, such as submittal requirements.

Here are some of the major features of SpecLink®E:

- Data is stored in a single database instead of multiple files
- Edit by selecting text instead of deleting text
- Intelligent links automatically trigger relevant options
- Easily convert typical project specifications into an Office Master project
- Separate notes-to-the-editor windows provide quick and easy assistance

For more information about BSD SpecLink®-E visit
