

# RADIANT SHIELD® Pro Plus

REFLECTIVE VAPOR BARRIER w/ **3M** ADHESIVE TECHNOLOGY

## DESIGNED SPECIFICALLY FOR THE RIGOROUS DEMANDS OF POST FRAME CONSTRUCTION

You only have one shot at installing a reflective vapor barrier under your roof and side walls. Why not make it one you can trust? Radiant Shield® Pro Plus fuses several technologies that make it ideal for use under metal roofing and siding in post frame construction. It consists of low-emittance foil laminated to a durable closed-cell foam core that won't crush, deflate, or lose air over time. A highly tear resistant cross-woven interior skin resists damage during installation and provides the building with a clean, bright white finish. The 74" x 300' roll size simplifies installation by leaving a 2" seaming tab after two 3' skins are applied. Built-in 3M peel and stick adhesive ensures a tight seam, even through seasonal temperature swings. With all this wrapped into one product, you can rest assured your building will be protected for years to come.

- » 74" x 300' Roll Size
- » Resilient Closed-Cell Foam Core
- » 3M Peel and Stick Adhesive Tab
- » Bright White Interior Finish
- » Ultra Tear Resistant
- » Class A Fire Rating
- » UV Inhibitor Coating
