Dear Don,

I would like to take a moment and give you some product feedback. We have had the product Insul-Tarp as part of our product line for one year. It has quickly become one of our fastest selling products. We combine the product in most cases as part of a radiant heating system package. We find it to be the best alternative to rigid foam since it can be installed in one tenth of the time. The cost saving to the customer is substantial since the product cost per square foot is close to rigid foam.

Our customers are also finding other ways to use the product, like wall insulation for a pig barn. The customer needed something that was durable and easy to clean. He didn't heat the structure but just wanted some protection from the elements. Insul-Tarp provided an excellent solution.

I recommend the product highly and find it to be a profitable part of our product line. We look forward to expansion of our marketing with Insul-Tarp, I think it has huge potential in all phases of the construction market.

Sincerely,

Doug Mossbrook  
President, Eagle Mountain Inc.
